

S2-07 “Invisible Continent: Converting the Waste into the Power Domain”

Mr. Hirofumi Nagao
(Meidensha Corp., Japan)

Abstract

MEIDEN, a current leader in micro turbine-based energy solutions in Japan, discusses its challenges to convert the wasted energy resources (digestive gas from the water treatment plant, urine and feces, wood chip oil and gas, waste edible oil) into the power. It explores the impacts to the distributed generation market.
