

Technologies to use carbon free ammonia in power plant

Toshiyuki SUDA

**Manager, Resources, Energy & Environment Business Area, IHI Corporation
Tokyo, Japan**

Keywords: *Ammonia, Hydrogen carrier, Coal fired boiler, Gas turbine, SOFC*

Abstract

Hydrogen is one of the promising energy carriers to reduce CO₂ emission from power plant. IHI is focusing on ammonia as a carbon free energy carrier because it is already used widely in the world as a fertilizer, and social cost to establish supply chain would be rather cheaper. IHI is developing technologies to use ammonia directly as a fuel in gas turbine, coal fired boiler and SOFC(Solid Oxide Fuel Cell) with the support from Japanese government.
