

## Delivering Carbon Capture at Scale

**Gabriel Dehlin**

**Study Manager, Technical Advisory Services, SLB Capturi**

**Keywords:** *Carbon Capture, Amine technology, Modular Solutions, Industrial Decarbonization*

**Abstract** (*approximately 200–400 words in one page*)

*SLB Capturi is a joint venture between SLB and Aker Carbon Capture, combining the strengths and capabilities of both companies to accelerate industrial decarbonization at a global scale. The new company, combines Aker Carbon Capture's amine-based Advanced Carbon Capture™ technologies, including Just Catch™ and Big Catch™ modular plant technologies for medium- and large-scale facilities serving a range of industries including WtE, Bio power, Gas to power, Cement and Pulp and paper.*

- To achieve decarbonization ambitions within the tight timelines, carbon capture is one of the key solutions. How is that maturing?
- Modular carbon capture solutions for WtE, biomass and gas to power facilities
- What is the latest on the current projects and carbon capture facilities in operation: the Waste-to-Energy operator Twence, the cement project at Brevik, the Celsio Waste-to-Energy facility and the biomass projects at Ørsted?
